## Department of Electronics and Communication Engineering

### CERTIFICATE

Certified that the **Internship** entitled **Android App Development using Gen AI** at **Mindmatrix** is carried out by **Ms. NISARGA H N (4RA22EC038)**, bonafide student of Rajeev Institute of Technology, Hassan, in partial fulfillment for the award of the Bachelor of Engineering in Electronics and Communication Engineering of Visvesvaraya Technological University, Belagavi during the year 2025-2026. The Internship report has been approved as it satisfies the academic requirements in respect of the mandatory internship prescribed for the said degree.

---

**Ms. Supriya Ananth K A**

Assistant Professor,  
Department of ECE,  
RIT, HASSAN.

---

**Dr. Prakash Kuravatti**

Associate Professor and  
Head of the Department,  
Department of ECE,  
RIT, HASSAN.

---

**Dr. Mahesh P K**

Principal  
RIT, HASSAN.

## DECLARATION

I, **Ms. NISARGA H N (4RA22EC038)**, student of final year B.E., Electronics and Communication Engineering, Rajeev Institute of Technology, Hassan, hereby declare that the work presented in this report entitled " **Android App Development using Gen AI at Mindmatrix** " is the outcome of my internship carried out independently under the guidance of **Ms. Supriya Ananth K A**, Assistant Professor, Department of Electronics and Communication Engineering, Rajeev Institute of Technology, Hassan, as partial fulfillment of the requirements for the award of B.E degree. This report has not been submitted for the award of any other degree in any other University.

**STUDENT NAME:** NISARGA H N

**STUDENT USN:** 4RA22EC038

**SIGNATURE:**

PLACE: HASSAN

DATE:

## ACKNOWLEDGEMENT

The satisfaction and euphoria that accompany the success of any task would be incomplete without the mention of the people who made it possible, whose constant guidance and encouragement crowned our efforts with success.

We would like to express our sincere thanks to our principal **Dr. Mahesh P.K,** Rajeev Institute of Technology for his encouragement.

We wish to express our gratitude to **Dr. Prakash Kuravatti**, Professor & Head, Department of ECE for providing a good working environment and for his constant support and encouragement.

It gives us great pleasure to express our gratitude to **Ms. Supriya Ananth K A**, Assistant Professor, and Department of ECE for her expert guidance, initiative and encouragement that led us to complete the Internship.

We would also like to thank all the staffs of Electronics and Communication Engineering department who have directly or indirectly helped us in the successful completion of the internship and also, we would like to thank our parents.

## Internship Offer Letter

To,  
**Nisarga H N**  
USN :  
Rajeev Institute of Technology, Hassan

Date : 19 September 2025

**Subject: Internship Offer Letter – Android App Development using GenAI**

Dear Nisarga H N,

Thank you for exploring internship opportunities with **MindMatrix.io**, a product of **CL Infotech Pvt. Ltd.**, through the **VTU Internship Portal**. We are pleased to offer you an internship with our organization.

This internship will run for **13 to 15 weeks** as per VTU Guidelines. The Internship will provide you with hands-on exposure through guided tasks, structured modules, and practical projects on the **MindMatrix Platform** (<https://lms.mindmatrix.io>).

During the internship, you will be engaged in product application development, supporting feature implementation, testing, preparing documentation, and cross-functional collaboration. These activities will require you to apply your technical knowledge and demonstrate your professional skills effectively.

All **internship policies and professional guidelines** will be provided in the **Internship Manual**, which will be shared with you on the day of program commencement.

**As part of the process, you are required to:**

- Print this offer letter and fill in the **Faculty Coordinator details** below.
- Obtain **HoD/Internship Coordinator signature with seal**.
- Email the scanned copy back to us within **48 hours** of receiving it.

For onboarding instructions, please refer to the attached **"Onboarding Steps"** document. We look forward to your participation and wish you a productive internship.

Warm regards,  
**Tirumal Mutalikdesai**  
Program Coordinator, MindMatrix.io

## INTERNSHIP COMPLETION LETTER

MindMatrix, an MoU partner of Visvesvaraya Technological University (VTU), has successfully conducted the internship program titled *"Android App Development using Generative AI"*, announced on the VTU internship portal.

The internship was conducted in **hybrid/online** mode from **27th September 2025 to 19th January 2026**, in accordance with **industry-standard processes and practices** followed by MindMatrix.

During the internship, the student was exposed to industry-aligned learning and hands-on practice in the following areas:

1. Android application development using **Kotlin** and **Jetpack Compose**
2. Hands-on experience with **Android Studio**, **Google Cloud Labs**, and **Google AI Studio** to explore **GenAI capabilities** in application development
3. **UI/UX design**, application prototyping, feature development, followed by **debugging and iterative enhancements**
4. **Project-based learning** involving **Firebase integration**, testing, and standard **Android development workflows**

The following student was enrolled in the internship program, and is subject to verification and validation by the respective college.

**Name:** Nisarga H N  
**USN:** 4RA22EC038  
**College Name:** Rajeev Institute Of Technology

The student's performance during the internship was evaluated based on **continuous participation, task completion, and overall engagement on the online platform MindMatrix.io**. Detailed performance metrics as per internship program coordinators' judgement is provided in the **attached annexure**.

The intern's overall performance during the internship was assessed based on the prescribed evaluation criteria and rated as Excellent / Good / **SATISFACTORY** / Needs Improvement

This evaluation is for internship assessment only and does not carry direct academic marks.

The certificate is issued at the student's request, based on records available with MindMatrix, without any risk or liability to the organization or its authorized signatories.

We wish the student the very best in their future academic and professional endeavors.

## ABSTRACT

*This internship report presents the work carried out at MindMatrixEd, Bengaluru, as part of the B.E curriculum under VTU. The internship focused on Android Application Development using Kotlin along with the integration of Generative AI technologies. The program provided hands-on experience in designing, developing, and testing Android applications using Android Studio and Jetpack Compose. During the internship, the Software Development Life Cycle (SDLC) was followed to understand structured application development. Mini projects such as a Login Page Application, Birthday Card Application, and Employee Dashboard were developed to strengthen knowledge in UI design, state management, and user interaction. These learnings contributed to the development of the main project, Employee Tracker, which included features like attendance management, task tracking, leave management, and performance monitoring. Google Firebase was used for backend services including authentication and real-time database management. Generative AI features were integrated using the Gemini Pro model through Google AI Studio to enhance application intelligence. Overall, the internship improved technical skills in Android development, backend integration, AI implementation, debugging, and problem-solving, preparing for real-world software development challenges.*

## Company Profile

### 1.1 Overview:

The internship on **Android App Development using Generative AI**, conducted by **MindMatrixEd** in a hybrid mode, offered a structured and industry-relevant learning experience focused on modern mobile application development. The program was designed to introduce students to Android application development using **Kotlin** as the primary programming language and **Android Studio** as the official development environment, along with the integration of Generative AI technologies.

The hybrid learning model combined online sessions with guided practical activities, allowing flexibility while ensuring continuous mentor support. The internship included theoretical explanations, hands-on coding exercises, UI design practices, and project-based learning, enabling participants to gain real-world development experience.

During the internship, I developed Android applications using Kotlin, designed intuitive user interfaces in Android Studio, and implemented Generative AI features to enhance app functionality and user interaction. By the end of the program, I acquired a solid foundation in Kotlin-based Android development and GenAI integration, equipping me with the skills required to build intelligent, AI-powered mobile applications and address real-world development challenges.

### 1.2 MindMatrixEd:

**Figure 1.1:** MindMatrixEd logo

MindMatrix is a technology-focused training and development organization that operates under **CL Infotech Pvt. Ltd.** The company is dedicated to providing industry- oriented training programs and internships for students in emerging technology domains. MindMatrix focuses on bridging the gap between academic learning and real-world technical skills through hands-on projects and guided mentorship. The organization offers training in areas such as Android application development, software engineering, and modern technology practices. The founder and director of MindMatrix is **Mr. Sujit Kumar**, who has played a key role in shaping the organization's vision and learning approach. During the internship, academic and technical guidance was provided by the coordinator **Mr. Tirumal Mutalikdesai**. The mentorship emphasized practical learning, project-based development, and skill enhancement. Through its structured programs, MindMatrix supports students in gaining practical exposure and industry readiness.

MindMatrixEd is an industry-aligned learning and skill-development organization focused on bridging the gap between academic knowledge and real-world technology careers. Based in Bengaluru, India, the company offers programs and internships that equip students with practical skills in emerging technologies such as **Generative AI**, software development, and career mentorship. MindMatrixEd's mission is to prepare students for the professional world by providing hands-on learning experiences, personalized guidance, project work, and exposure to industry-relevant tools and practices. The organization emphasizes close interaction with experienced mentors and real-time tasks, ensuring that participants not only learn concepts but also apply them effectively in project environments. Through its internship and training initiatives, MindMatrixEd aims to help students transition **from campus to career** by enhancing technical competency, problem- solving ability, and confidence in current tech trends.

### 1.3 Goals of the Company:

- To understand and apply the fundamentals of **Android application development** using **Kotlin** and **Android Studio**.
- To integrate **Generative AI** capabilities within an Android application for intelligent content generation and automation.
- To design user-friendly and responsive interfaces following Android UI/UX best practices.
- To implement core app functionalities such as user input handling, API integration, and data processing.

- To gain hands-on experience in combining **mobile development** with **AI technologies**.
- To enhance problem-solving, debugging, and real-world application development skills.

#### **1.4 Visions of the Company:**

- To provide industry-relevant technical education that bridges the gap between academic knowledge and practical skills.
- To empower students with hands-on experience in emerging technologies and modern development practices.
- To promote innovation and creativity through project-based learning and real-world problem solving.
- To nurture technically competent and industry-ready professionals.
- To encourage continuous learning and adaptability in a rapidly evolving technology landscape.
- To deliver quality training supported by experienced mentors and structured learning paths.
- To contribute to the development of a skilled and future-ready workforce.

#### **1.5 Missions of the Company:**

- To deliver structured and practical training programs aligned with current industry requirements.
- To provide hands-on project experience that enhances technical competence and problem-solving skills.
- To guide students through mentorship and continuous technical support.
- To focus on skill development in modern technologies such as mobile application development and AI.
- To encourage ethical practices, professionalism, and teamwork among learners.
- To support students in building strong technical foundations for future career opportunities.
- To continuously improve training methodologies to match evolving technological trends.

### **1.6 Role of the Organization in Skill Development:**

MindMatrix plays a significant role in enhancing the technical and professional skills of students through structured training programs. The organization focuses on providing hands-on learning experiences that complement academic education. Practical exposure through real-time projects helps students apply theoretical concepts effectively. Mentorship and guidance from experienced trainers support continuous skill improvement. The organization emphasizes problem-solving and logical thinking in software development. Training modules are designed to improve both technical competence and confidence. Students are encouraged to explore modern tools and technologies relevant to industry needs. Regular assessments and feedback help track learning progress. Overall, the organization contributes to preparing students for real-world technical challenges.

### **1.7 Industry Focus and Learning Approach:**

MindMatrix follows an industry-focused learning approach to ensure students gain relevant and up-to-date technical knowledge. The training curriculum is aligned with current industry standards and technological trends. Emphasis is placed on practical implementation rather than purely theoretical learning. Project-based training allows students to understand real-world development workflows. The organization promotes learning through experimentation and hands-on practice. Guidance from industry-experienced mentors helps bridge the gap between academics and professional requirements. Continuous learning is encouraged through workshops and technical sessions. The approach ensures adaptability to evolving technologies. This learning methodology prepares students for industry-ready roles.

## Objectives

### 1. To Gain Practical Knowledge in Android Development

The primary objective of this internship was to gain hands-on experience in Android application development using Kotlin and Android Studio. This involved understanding project structure, activity lifecycle, intents, fragments, and various Android components. The internship helped bridge the gap between theoretical concepts learned in academics and real-world mobile application development practices.

### 2. To Understand the Complete Application Development Lifecycle

Another important objective was to understand the entire mobile application development lifecycle. This included requirement analysis, planning, UI and UX design, coding, testing, debugging, deployment, and maintenance. Learning each stage provided a clear understanding of how professional applications are built and managed in the industry.

### 3. To Develop Strong UI/UX Design Skills

The internship aimed to enhance knowledge in designing user-friendly and responsive interfaces. This included working with XML layouts, constraint layouts, material design components, and navigation components. Emphasis was given to creating intuitive designs that improve usability and user satisfaction.

### 4. To Integrate Generative AI into Mobile Applications

A key objective was to explore the integration of Generative AI concepts within Android applications. This involved understanding how AI can enhance application functionality through intelligent responses, automation, personalization, and smart data processing. The internship provided exposure to modern AI-driven development approaches.

### 5. To Improve Problem-Solving and Debugging Skills

During the development process, various technical challenges and coding errors were encountered. One objective was to strengthen logical thinking and debugging skills by analyzing error logs and implementing effective solutions. This improved analytical ability and confidence in handling real-time technical issues.

### 6. To Work with Databases and Data Management

The internship focused on understanding data storage and management in Android

applications. This included handling user input, storing application data, retrieving information efficiently, and ensuring data security. Learning these techniques enhanced application performance and reliability.

#### **7. To Enhance Teamwork and Professional Communication**

The internship provided opportunities to collaborate with team members, assign roles, and participate in project reviews. This objective helped in developing teamwork, leadership qualities, and effective communication skills. Regular discussions with the trainer improved technical presentation and documentation abilities.

#### **8. To Gain Industry Exposure and Professional Development**

The final objective was to gain exposure to industry-level development standards and professional work ethics. The internship helped in understanding modular programming, code optimization, time management, and meeting project deadlines. This experience prepared me for real-world software development environments.

## **Domain:**

The domain of this internship was Android Application Development integrated with Generative Artificial Intelligence. It focused on designing and developing Android mobile applications using Kotlin and Android Studio while incorporating AI-based features to enhance user interaction and automation. The domain combined mobile development fundamentals with modern AI-driven technologies to build intelligent and user-friendly applications.

## **Technical Domain Used:**

The internship domain centred on Android Application Development using Kotlin as the primary programming language and Android Studio as the development environment. It involved understanding Android architecture components such as Activities, Fragments, View Models, Intents, RecyclerView, and Navigation Components. The domain also included implementing Material Design principles for responsive UI/UX development.

Additionally, the internship incorporated Generative AI integration within mobile applications. This involved understanding AI-driven content generation, intelligent response systems, automation techniques, and personalization features. The technical exposure included API integration, local data storage, debugging using Logcat, performance optimization, and modular programming practices aligned with industry standards.

## **Scope of the Domain:**

The domain of the internship was Android Application Development integrated with Generative Artificial Intelligence. It involved developing mobile applications using Kotlin and Android Studio while incorporating intelligent AI-based functionalities.

The scope of this internship included understanding the complete mobile application development lifecycle, from requirement analysis to deployment. It covered UI/UX design, database management, API integration, debugging, and testing. The integration of Generative AI expanded the scope by enabling applications to provide smart responses, automated content generation, and personalized user experiences. This domain prepared interns to develop scalable, efficient, and industry-ready Android applications with intelligent capabilities.

## Tools and Technologies used

The following tools and technologies were used during the internship:

- Programming Language: Kotlin
- Development Environment: Android Studio
- UI Design: XML Layouts, Material Design Components
- Architecture Components: Activities, Fragments, Intents, View Model
- Database: SQLite / Local Data Storage
- Debugging Tools: Logcat
- Version Control: Git (if used)
- AI Integration: Generative AI concepts and API-based AI services
- Testing: Emulator and Real Device Testing

## OVERVIEW OF INTERNSHIP

As per the core curriculum requirements of the B.E course under VTU, I completed my internship at MindMatrixEd, Bengaluru. The content of all chapters is thoroughly explained and is based on practical work and skill development in a real-world environment.

The internship training was focused on Android application development using Kotlin with the integration of Generative AI technologies. The program aimed to provide hands-on experience in designing, developing, and testing modern Android applications using Android Studio and Jetpack Compose. The internship was designed for students with a basic understanding of programming who wanted to strengthen their skills in mobile application development and AI- driven features. During the internship, I gained practical experience in building user-friendly interfaces, implementing application logic using Kotlin, and managing backend services using Google Firebase. I also worked with the Gemini Pro model through Google AI Studio to integrate intelligent content generation features into the application. The training enhanced my understanding of Android architecture, application lifecycle, and real-world development practices. Overall, the internship provided valuable exposure to modern Android development combined with emerging Generative AI technologies.

## HANDS-ON PRACTICE AND PROJECTS

This chapter describes the analysis and design of the Android application developed using Kotlin during the internship. The system is designed to provide a simple and user-friendly Android application with intelligent features enabled through Generative AI. Functional requirements include user interaction through a mobile interface, AI-based content generation using the Gemini Pro model, and data storage using Google Firebase. Non-functional requirements include application performance, usability, scalability, and security. The system follows a modular design to ensure easy maintenance and future enhancements. The application architecture consists of a frontend built using Jetpack Compose, an AI processing layer using Gemini Pro, and a backend database managed by Firebase. User inputs are processed through the application interface and forwarded to the AI model when required. The generated responses are displayed to the user and optionally stored in the database. Firebase handles real-time data storage and retrieval efficiently. This structured design ensures smooth interaction between the user interface, AI components, and backend services.

### 1. Login Page Application:

Figure 1: Login page application

The Login Page application was developed as a practice mini project to understand Android user interface design and user interaction using **Kotlin** and **Jetpack Compose**. This project

focused on creating a structured and visually appealing login screen. The interface includes input fields for email address and password along with a login button. As part of UI practice, different components such as buttons, cards, images, and spacing elements were implemented. Logo imports were exercised by integrating icons such as Google and Facebook to simulate social login options. Card layouts were used to group UI elements and improve visual organization. State management was applied to handle user input dynamically. This project enhanced understanding of layout composition, alignment, and UI responsiveness. Overall, the Login Page application helped build confidence in designing modern and user-friendly Android interfaces.

## 2. BirthdayCard Application:

**Figure 2:** Birthday Card Application

The Birthday Card application was developed as a practice mini project to understand text styling and layout design using **Kotlin** and **Jetpack Compose**. This project focused on creating a simple digital greeting card with a personalized message. Different font sizes, font weights, and text alignment options were used to enhance the visual appearance of the greeting. A button was implemented to allow interaction, such as changing the greeting message dynamically. State handling was used to update the displayed text when the button was clicked. Basic visual effects and smooth UI transitions were explored to improve user

experience. Layout spacing and padding were carefully adjusted to maintain a clean and balanced design. The project helped in understanding composable functions and UI recompositing. Overall, the Birthday Card application improved familiarity with text customization, user interaction, and basic UI behavior in Android development.

### 3. Employee Dashboard Application:

Figure 3: Login Screen of Project

The Employee Dashboard application was initially developed as a **practice mini project** to understand dashboard layout design and basic functionality in Android using **Kotlin** and **Jetpack Compose**. In the mini project version, the focus was primarily on experimenting with UI components and screen structure. The user interface of the mini project dashboard was basic and not fully user-friendly. Functionality was limited, with only a simple toggle-based operation implemented to represent user status. This helped in understanding state handling and UI interaction but highlighted limitations in usability and design consistency.

Based on the learnings from the mini project, a **fully enhanced Employee Dashboard** was developed as part of the main project, Employee Tracker. The main dashboard featured a well-structured and visually improved user interface. Multiple functional modules such as attendance marking, task display, leave request, and status tracking were implemented. Card-based layouts were used extensively to organize information clearly. Interactive elements such as buttons, icons, and status indicators were integrated to improve usability. State management was handled effectively to reflect real-time changes. Navigation between screens was smooth and intuitive. Compared to the mini project, the main Employee Dashboard demonstrated significant improvement in design quality, functionality, and user

experience. This progression clearly reflects the practical learning and skill enhancement achieved during the internship.

Figure 4: Employee dashboard Screen

#### 4. Key Learnings from Projects:

- Gained a strong understanding of basic **Android application structure** and project setup using Kotlin and Android Studio.
- Improved skills in **user interface design** using Jetpack Compose, including layout arrangement, spacing, and alignment.
- Learned to handle **user input and state management** effectively through practice-based implementations.
- Developed an understanding of **interactive UI components** such as buttons, toggles, cards, and text fields.
- Identified common **UI and usability challenges**, which helped in improving design decisions for the main project.
- Enhanced **debugging and problem-solving skills** by resolving UI and logic-related issues during development.
- Built confidence to design and implement a **more complex and user-friendly application** in the final project.

#### 5. Outcomes of Project:

The practice-based mini projects played an important role in shaping the development of the main project. Through these projects, a clear understanding of Android application

structure and workflow was achieved. Practical experience with Kotlin and Jetpack Compose helped improve coding confidence. The challenges faced during UI design highlighted the importance of usability and layout consistency. Working with limited functionality in the mini projects helped identify areas that required improvement. These experiences influenced better design decisions in the main project. The knowledge gained in handling user interaction and state management was applied effectively. Debugging issues during practice improved problem-solving skills. Overall, the learning outcomes from the mini projects provided a strong foundation for developing a more complete and user-friendly main application.

**a. Data Flow Description:**

**Figure 5: Data Flow Diagram**

Data flow describes how information moves within the system. User input is first captured through the application interface. The input is processed by the application logic layer. If AI processing is required, the input is sent to the Gemini Pro model. The AI model generates a response based on the input. The response is returned to the application logic. Data may be displayed to the user. This flow ensures seamless interaction between system components.

**6. Learning Outcomes Leading to the Project:**

After completing the practice-based mini projects, the focus was shifted toward developing the main project titled Employee Tracker. The mini projects helped in gaining clarity on Android UI design and application workflow. Lessons learned from earlier usability and design

limitations were carefully considered during planning. A more structured and user-centric approach was adopted for the main application. The transition involved moving from simple UI experimentation to implementing real-world functionality. Improved coding practices and modular design principles were applied. Greater emphasis was placed on usability, navigation, and feature completeness. The experience gained during the practice phase reduced development challenges. This smooth transition contributed significantly to the successful implementation of the main project.

## SNAPSHOTS

### 1. Google firebase:

Google Firebase is a backend-as-a-service platform used for application data management. In this project, Firebase was used to store and retrieve application data efficiently. It provides a real-time database that enables seamless data synchronization. Firebase offers cloud-based services that reduce the need for complex backend development. The platform ensures secure data handling and scalability. Firebase integrates easily with Android applications through SDKs.

**Figure 6:** Authentication Page

Firebase Authentication provides secure user authentication services. It supports email,

password, and third-party login methods. In this project, it was used to manage user access securely. Firebase Authentication simplifies login implementation. It enhances application security and user management. The platform ensures secure data handling and scalability. Firebase integrates easily with Android applications through the processes of SDKs and Room databases.

Figure 7: Hr Collection

Figure 8: Attendances Collection

Figure 9: Employee Collection

Figure 10: Leaves Collection

Figure 11: Tasks Collection

## 2. Android Studio:

Android Studio is the official integrated development environment used for Android application development. It provides a complete suite of tools required for designing, developing, testing, and debugging Android applications. In this project, Android Studio was used to write Kotlin source code, design user interfaces, and manage project resources efficiently. In this project, Android Studio was used to write Kotlin source code, design user interfaces, and manage project resources efficiently.

**DAILY ENTRY REPORT**

| <b>Day wise Training for Internship</b> |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Name of the Company:</b>             |             | <b>MINDMATRIX</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Student Name &amp; USN:</b>          |             | <b>4RA22EC038</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Date of Starting:27/09/2025</b>      |             | <b>Date of ending:29/01/2026</b>                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Days</b>                             | <b>Date</b> | <b>Day Summary of Report</b>                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Day 1                                   | 27/09/2025  | It was the first class of the internship, where we had a brief introduction to the internship program on Android App Development using Generative AI. During the session, I learned about the overall structure, objectives, and learning outcomes of the internship. I also created my profile as part of the onboarding process, which marked the beginning of my journey in this internship program.                                                                |
| Day 2                                   | 29/09/2025  | I was introduced to the basics of Artificial Intelligence. I learned that AI refers to the ability of a computer or system to perform tasks that usually require human intelligence, such as thinking, reasoning, and making decisions. The session mainly focused on understanding how machines can imitate human intuition and inference. This helped me gain a clear foundation of what AI is and why it plays an important role in modern technology.              |
| Day 3                                   | 30/09/2025  | I explored how AI fundamentals are applied in real-world scenarios. I learned that many AI capabilities fall under areas like numeric prediction and language processing. These technologies are widely used in business applications, education platforms, and industrial systems to improve efficiency and decision-making. This session helped me understand how AI is not just a concept but a practical tool that supports everyday needs across various domains. |
| Day 4                                   | 03/10/2025  | I learned about the Technology Ecosystem of Generative AI. I understood that generative AI is designed to assist both individuals and businesses in handling various language-based tasks such as writing, summarizing, and generating ideas. The session helped me understand how generative AI systems work and why they are becoming an important part of modern technology.                                                                                        |
| Day 5                                   | 04/10/2025  | I learned how the rapid growth of generative AI is driven by the availability of large datasets, advanced AI architectures, and high computing power. The convergence of these elements has significantly boosted                                                                                                                                                                                                                                                      |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | the development of generative AI technologies and expanded the overall AI ecosystem. This learning gave me a clear understanding of how generative AI is transforming industries and creating new opportunities across various domains.                                                                                                                                                                                                                                    |
| Day 6  | 06/10/2025 | I learned about Generative AI and its core concepts. I understood that GPT in ChatGPT stands for Generative Pre-trained Transformer. GPT models are a type of neural network designed to understand and respond to plain language questions and requests. These models can generate responses that closely resemble human-written text. This session helped me understand how Generative AI enables machines to communicate in a more natural and intelligent way.         |
| Day 7  | 07/10/2025 | I learned about the impact of ChatGPT and similar GPT models when they were released to the public. For the first time, people were able to have real conversations with a computer, which felt surprising, slightly eerie, and highly engaging. This unique experience drew widespread attention and interest toward Generative AI. The discussion helped me realize why such models quickly gained popularity and how they changed people's perception of AI technology. |
| Day 8  | 08/10/2025 | Today, I learned about Natural Language Processing (NLP) and its importance in the field of artificial intelligence. I understood that modern NLP has evolved into two major subfields: Natural Language Understanding (NLU) and Natural Language Generation (NLG). This session gave me a basic understanding of how machines are trained to work with human language in a meaningful way.                                                                                |
| Day 9  | 09/10/2025 | I focused on Natural Language Understanding (NLU). I learned that NLU involves converting unstructured data, such as text or speech, into structured data that machines can process. NLU uses various techniques to interpret written or spoken language by understanding its meaning, intent, and context. This learning helped me understand how AI systems analyze and make sense of human language more accurately.                                                    |
| Day 10 | 10/10/2025 | I learned about NLP parsing and studied Natural Language Processing at a high level, especially in relation to the English language. I understood that most NLP research to date has been conducted using English due to the availability of large datasets and resources.                                                                                                                                                                                                 |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | However, I also learned that significant research and development are taking place in other languages that have very different structures, such as Spanish, French, Farsi, Urdu, Chinese, and Arabic. This session helped me understand the diversity and global scope of NLP.                                                                                                                                                                                                                                                                                   |
| Day 11 | 11/10/2025 | I learned that NLP is a rapidly evolving field within artificial intelligence. Continuous advancements in NLP are leading to more sophisticated language understanding, improved cross-language capabilities, and stronger integration with other AI domains. This learning gave me insight into how NLP is shaping the future of human-computer interaction and enabling AI systems to communicate more effectively across languages and cultures.                                                                                                              |
| Day 12 | 13/10/2025 | I learned about the basics of Large Language Models (LLMs). I understood that LLMs are advanced AI models designed to understand and generate humanlike text, similar to a virtual assistant. These models are trained on vast amounts of text data, which helps them learn language patterns, sentence structures, and the relationships between words. This session helped me understand how LLMs can respond intelligently to user queries and support various language-based tasks.                                                                          |
| Day 13 | 14/10/2025 | I learned how Salesforce uses LLMs through its Einstein platform. As part of Salesforce's commitment to an open AI ecosystem, Einstein is designed to support LLMs from providers such as Amazon, Anthropic, Cohere, and others, all hosted entirely within the Salesforce infrastructure. I also learned that Einstein helps ensure customer prompts and responses remain secure within Salesforce's environment. This session gave me a practical understanding of how LLMs are integrated into enterprise platforms while maintaining data privacy and trust. |
| Day 14 | 15/10/2025 | I learned about Data and its role in the field of Artificial Intelligence. I understood that data includes facts, figures, statistics, documents, images, videos, and other forms of information that provide insights into different aspects of the world. This session helped me realize how data forms the foundation for analysis and decision-making in modern systems.                                                                                                                                                                                     |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Day 15 | 16/10/2025 | I learned how data has become an essential part of modern life and the global economy. With advancements in technology, businesses are now able to collect, store, and analyze large volumes of data to gain valuable insights into their operations and customer behavior. This learning helped me understand how data-driven approaches support better decision-making and innovation in organizations.                                                                                                                                                                             |
| Day 16 | 17/10/2025 | I learned about the importance of data in Artificial Intelligence. I understood that data is a core component of AI systems, and the success of any AI application depends heavily on the quality and validity of the data used. The session emphasized how accurate, complete, and well-structured data helps AI models learn effectively and produce reliable results.                                                                                                                                                                                                              |
| Day 17 | 18/10/2025 | I learned about key considerations for data quality and validity. This includes ensuring that the data is accurate, complete, and representative of the population being studied. I also learned that poor quality data can negatively affect AI decision-making, leading to inaccurate or biased outcomes. This session helped me understand that maintaining data quality is crucial from the very beginning of an AI project to ensure trustworthy and meaningful results.                                                                                                         |
| Day 18 | 23/10/2025 | I learned about various Artificial Intelligence techniques and how machines are designed to learn and think like humans. I understood that AI is a broad field that includes multiple technologies. The session focused on machine learning, where mathematical algorithms are used to analyze data, identify patterns, and make predictions. I also learned about deep learning, which uses neural networks to discover complex relationships between inputs and outputs. This learning helped me understand how different AI techniques work together to solve real-world problems. |
| Day 19 | 24/10/2025 | I learned about Generative AI and its unique capabilities. Unlike traditional AI models that mainly focus on making predictions, generative AI creates entirely new content based on given inputs. This includes generating images, videos, text, and other creative outputs that are similar to the original data. I also explored how generative AI is applied in areas such as art, music, and                                                                                                                                                                                     |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | creative writing. This session helped me understand the growing impact of generative AI across creative and practical applications.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Day 20 | 25/10/2025 | I learned about data ethics, privacy, and their importance in Artificial Intelligence. I understood that while AI technologies are powerful, they must be implemented responsibly to avoid compromising user trust and data security. The session highlighted how ethical considerations in AI help protect sensitive information and ensure that AI systems are used in a fair and transparent manner.                                                                                                                                                                  |
| Day 21 | 27/10/2025 | I learned about how Salesforce addresses AI ethics and security through the Einstein Trust Layer. I understood that the Einstein Trust Layer is a secure AI architecture built into the Salesforce platform. It consists of agreements, security technologies, and data privacy controls that help organizations safely explore and use generative AI solutions. This learning helped me understand how enterprises can adopt AI without risking data exposure.                                                                                                          |
| Day 22 | 28/10/2025 | I learned about the practical benefits of using AI solutions with built-in trust and security. The Einstein Trust Layer helps protect sensitive data through techniques such as data masking and securely merging relevant records with AI prompts to generate accurate results. This approach allows organizations to use advanced features like AI agents and generative tools confidently, without compromising their brand or reputation. This session gave me clarity on how trust-driven AI enables innovation while maintaining strong data protection standards. |
| Day 23 | 29/10/2025 | I learned how Data, Artificial Intelligence, and CRM systems work together to improve business processes. I understood that AI can use large volumes of data, including data stored in CRM systems, to make smart predictions and automate routine tasks. This helps organizations better understand their customers, analyze behavior patterns, and anticipate customer needs more accurately. This session gave me insight into how data-driven AI enhances customer relationship management.                                                                          |
| Day 24 | 30/10/2025 | I learned how Generative AI adds more value to CRM systems by creating personalized and custom                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | communication based on customer insights. I also learned about AI assistants that help teams manage work more efficiently by providing configurable support tailored to team requirements and powered by data. This learning helped me understand how AI driven CRM solutions improve productivity, customer experience, and overall business efficiency.                                                                                                                                                                  |
| Day 25 | 31/10/2025 | I learned about prompts and their importance when working with Large Language Models (LLMs). I understood that while LLMs can support businesses and teams in various language-based tasks such as generating personalized emails or analyzing customer feedback, they require proper guidance to produce high-quality results. This guidance is provided through prompts, which help direct the model to generate relevant and meaningful content.                                                                        |
| Day 26 | 01/11/2025 | I learned about prompt templates and how they improve efficiency and consistency. A prompt template is a reusable prompt that includes placeholders for specific details such as customer information, product data, or business context. When these placeholders are filled with accurate and relevant data, the prompt template becomes a fully personalized prompt. This learning helped me understand how prompt templates enable scalable and customized content generation across different use cases.               |
| Day 27 | 03/11/2025 | I learned about the Prompt Builder and how it is used to create and manage prompt templates. I understood that generative AI has transformed the way tasks are performed, from summarizing lengthy documents to creating digital art and even planning trips. The session explained how businesses are adopting generative AI to improve productivity across areas like sales, marketing, and customer service. This learning helped me realize that the effectiveness of generative AI begins with well-designed prompts. |
| Day 28 | 04/11/2025 | I learned how prompts act as the primary way to communicate with the Large Language Models (LLMs) behind generative AI technologies. I also learned about the importance of grounding prompt templates with relevant and accurate data to ensure reliable outputs. This session gave me a clearer understanding of how effective prompts help businesses generate meaningful, consistent, and context-aware results while using generative AI                                                                              |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | responsibly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Day 29 | 05/11/2025 | I learned about building Field Generation Prompt Templates. I understood that a field generation prompt template is a specialized type of prompt template designed to generate responses from a Large Language Model (LLM) and store them directly into a specific field of a record. These templates have a direct relationship with record fields, which helps in automating content generation within structured data. This session helped me understand how generative AI can be tightly integrated into business records to improve efficiency.                                                                                                                                                                                   |
| Day 30 | 06/11/2025 | I learned how tools like Lightning App Builder (LAB) and Flow Builder are used to implement field generation prompt templates in a practical way. I understood that an Einstein button created using Lightning App Builder can trigger an assigned prompt template, send the prompt to the LLM, and return the generated response to the specified record field. I also learned that using Flow Builder, admins can create Template-Triggered Prompt Flows to add complex logic to prompt templates without writing any code. These flows run only when triggered by a prompt template, making the process structured and efficient. This session gave me a practical understanding of how no-code tools enhance AI-driven automation. |
| Day 31 | 07/11/2025 | I learned about the prompt journey and response journey in generative AI workflows. I understood how a prompt template gets populated with relevant customer data and required resources before being sent to a Large Language Model (LLM). This session helped me understand how contextual and accurate data plays a key role in generating meaningful and relevant AI responses. It gave me clarity on how prompts are dynamically enriched using real customer information.                                                                                                                                                                                                                                                        |
| Day 32 | 08/11/2025 | I learned about how the Einstein Trust Layer protects sensitive data before it is shared with an external LLM. I understood that data security measures such as masking and privacy controls are applied to ensure customer information remains safe. Only the necessary and relevant data is sent to the LLM to generate accurate responses. This session helped me understand how secure AI practices allow organizations to use generative AI                                                                                                                                                                                                                                                                                       |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | confidently while maintaining trust and data privacy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Day 33 | 10/11/2025 | I learned about autonomous agents and how they differ from traditional chatbots. I understood that autonomous agents are capable of understanding requests, setting tasks for themselves, and completing those tasks without continuous human intervention. Once a goal is defined, the agent generates a sequence of actions and works through them until the goal is achieved. This session helped me understand how autonomous agents can function independently in dynamic environments.                                                                                                                                                       |
| Day 34 | 11/11/2025 | I learned how autonomous agents are used in realworld business scenarios such as customer service, marketing, sales, and commerce. Unlike rule-based chatbots, autonomous agents can adapt to changing situations, making them suitable for handling complex tasks. Although they operate independently, they still require humans to define clear goals and objectives. I also learned how using autonomous agents can save time and resources, allowing businesses to focus more on improving customer experience and driving growth. This session gave me a practical understanding of how autonomous agents add value to modern organizations. |
| Day 35 | 12/11/2025 | Today's a special day! its Kannada Rajyotsava, and I'm feeling super proud to be a Kannadiga. Our mentor gave me a cool task- to create a chatbot about Mysore paintings and their styles. I'm excited to dive into this project and learn more about our rich cultural heritage. Mysore paintings are all about intricate designs, vibrant colors, and a glimpse into Karnataka's history. can't wait to share this with everyone through the chatbot!                                                                                                                                                                                            |
| Day 36 | 13/11/2025 | There was a workshop about how to be a super user. Mentor guided us more about these like how we can be a super user, example if we find anything unusual in social media immediately, we will be searching the true fact about it. And the main point I learnt how I can be a super user was, if I find nothing is going on properly, I need to stop investigate about it perfectly then proceed.                                                                                                                                                                                                                                                 |
| Day 37 | 14/11/2025 | I learned how autonomous agents can transform businesses and workflows. I understood that autonomous agents can act as a key differentiator by being always                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | available to interact with customers across multiple channels. These agents can respond instantly, provide accurate information, and resolve issues quickly by focusing on facts. This session helped me understand how autonomous agents improve efficiency and reliability in business operations.                                                                                                                                                                                                                                                                     |
| Day 38 | 15/11/2025 | I learned about the practical applications of autonomous agents in various business areas. These include customer support, where agents handle queries and issues efficiently; order management, where they help track and resolve order-related tasks; and lead generation, where they assist in identifying and engaging potential customers. This learning helped me realize how autonomous agents save time, reduce manual effort, and enhance the overall customer experience.                                                                                      |
| Day 39 | 17/11/2025 | I attended a Gemini workshop, which was an exciting and interactive hands-on session. During the workshop, I explored various features of Gemini on the Google Cloud Platform. The session provided practical exposure and helped me understand how Gemini can be used effectively for different AI-driven tasks. Overall, it was an engaging learning experience that enhanced my understanding of cloud-based AI tools.                                                                                                                                                |
| Day 40 | 18/11/2025 | I learned about Agentforce and its core concepts. I understood that Agentforce is built using smart technologies and highly customizable components. It uses the power of artificial intelligence, including machine learning and natural language processing, to understand conversations, questions, and user requests. Agents process these requests by following defined instructions and provide responses that are grounded in secure and trusted data. This session helped me understand how intelligent agents can interact naturally and accurately with users. |
| Day 41 | 19/11/2025 | I learned about Agentforce Builder and how it helps in creating and deploying agents. I understood that Agentforce Builder allows agents to be deployed across multiple platforms where employees or customers interact, such as Slack, CRM systems, or websites. I also learned that once an agent is built, there are numerous ways to customize its behavior and functionality using Agentforce Builder. This learning gave me insight into how flexible and scalable AI agents can be designed to                                                                    |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | meet different business needs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Day 42 | 20/11/2025 | I learned about the different types of tasks that Agentforce can perform. These include customer support, sales assistance, order management, marketing activities, and internal employee support. I understood how these AI agents can work continuously, handle multiple requests at the same time, and help businesses save time and resources while improving overall productivity and customer experience.                                                                                                                                                                                                                                     |
| Day 43 | 21/11/2025 | I learned about the core building blocks of Agentforce for Service and how they help customize the way an agent interacts with customers. I understood that one of the strongest features of Agentforce is its flexibility in defining how an agent functions. This customization is driven by three key elements: topics, actions, and instructions. These elements work together to guide the agent's decision-making process and improve how it responds to customer interactions. I also learned that a topic is created first and then actions and instructions are added under that topic, making the structure organized and easy to manage. |
| Day 44 | 22/11/2025 | I learned more about how topics control the behavior of an agent. I understood that classification descriptions help the system decide whether a particular topic is the correct one to use based on the customer's intent. I also learned about the concept of scope, which defines exactly what the agent is allowed to do when a topic is active. Scope works like clear guidance to the agent, focusing it only on specific tasks at that moment. This learning helped me understand how Agentforce delivers accurate and relevant responses by clearly defining what the agent should and should not do during each interaction.               |
| Day 45 | 24/11/2025 | I learned about Agentforce for Sales and how it helps sales teams meet modern customer expectations. I understood that today's customers expect relevant and personalized interactions, but sales representatives have limited time and many customers to manage. Agentforce for Sales supports sales reps by assisting them throughout the entire sales cycle. This learning helped me understand how AI-powered sales agents can help reps work more efficiently and focus on meaningful customer                                                                                                                                                 |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | interactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Day 46 | 25/11/2025 | I learned how Agentforce acts as a powerful set of tools to create, customize, and deploy both assistive and autonomous agents for sales teams. These agents help with tasks such as nurturing leads 24/7, coaching sales reps to improve their performance, and speeding up quoting processes to close deals faster. I also learned that by automating routine tasks and supporting reps at every stage, Agentforce helps scale sales efforts across all customers. Overall, this session helped me understand how Agentforce boosts sales productivity and contributes to faster revenue growth. |
| Day 47 | 26/11/2025 | I learned how to enhance Agentforce so it can act on data using conversational language. As part of the hands-on activity, I created a Check-In action in Agentforce and added it to an Agentforce agent. After configuring the action, I activated it for the account. This exercise helped me understand how agents can perform real data-driven actions while interacting naturally through conversation, making the system more responsive and useful for real business scenarios.                                                                                                             |
| Day 48 | 27/11/2025 | I started a new learning session on Android app development using Kotlin. As part of this session, I created my profile in Kotlin and got familiar with the basic setup required for Android development. This marked the beginning of my journey into building Android applications and understanding how Kotlin is used as the primary programming language for modern Android apps.                                                                                                                                                                                                             |
| Day 49 | 28/11/2025 | I started with my first program in Kotlin. I learned that every Kotlin program requires a main function, which acts as the entry point of the program. I also used the println function to display text as output on the screen. In addition, I learned about troubleshooting, which is the process of identifying and resolving errors in the code. This session helped me understand the basic structure of a Kotlin program and the importance of debugging while programming.                                                                                                                  |
| Day 50 | 29/11/2025 | I learned how to run an Android app using the Android Emulator. I used the Device Manager to create an                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | Android Virtual Device (AVD). I understood that an AVD is a software-based version of an Android device that runs on a computer and mimics the configuration of real devices such as phones, tablets, TVs, watches, or Android Auto systems. After creating the AVD, I used it to run the Greeting Card app. This session helped me gain practical experience in testing Android applications without needing a physical device.                                                                                             |
| Day 51 | 01/12/2025 | I gained basic knowledge of how to use Android Studio. I learned how to navigate the interface, open projects, and understand essential tools used during Android app development. I also learned how to open and adjust settings on an Android device, which is important for testing apps and managing device configurations. This session helped me become more comfortable with the development environment and prepared me for further hands-on Android development tasks.                                              |
| Day 52 | 02/12/2025 | I learned how to run an Android app on a physical device using a USB cable. I enabled USB debugging in the developer options on the Android device, which allows Android Studio to communicate with the device for testing purposes. After connecting the device to the computer with a cable, I successfully ran the app directly on the Android device. This session helped me understand real-device testing and its importance in Android app development.                                                               |
| Day 53 | 03/12/2025 | I learned how to run an Android app on a physical device using a Wi-Fi connection. I ensured that both the computer and the Android device were connected to the same wireless network. I also verified that the device was running Android 11 or higher. In addition, I checked that my computer had the latest version of Android Studio installed and that the SDK Platform Tools were up to date. This session helped me understand how wireless debugging works and how to test Android apps without using a USB cable. |
| Day 54 | 04/12/2025 | I learned different ways to run Android apps on a physical device, either using a USB cable or through a Wi-Fi connection. I understood that Windows users need to install a USB debugging driver to successfully run apps on a physical device using a cable. I also learned that when running apps over Wi-Fi, the device can be paired with the computer using either a QR code or a 6-                                                                                                                                   |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | digit pairing code. This session helped me understand flexible and convenient methods for testing Android applications on real devices.                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Day 55 | 05/12/2025 | I worked on Jetpack and learned about Jetpack Compose, which is a modern toolkit for building Android user interfaces. I understood that Jetpack Compose simplifies and speeds up UI development by reducing the amount of code needed and using powerful, intuitive Kotlin features. With Compose, UI is built by defining a set of functions called composable functions, which take data as input and describe how UI elements should appear. This session helped me understand a more efficient and declarative way of designing Android app interfaces.          |
| Day 56 | 06/12/2025 | I learned how Jetpack Compose simplifies and accelerates UI development for Android applications. I understood that it allows developers to create user interfaces using less code while taking advantage of powerful tools and intuitive Kotlin APIs. I also learned that the user interface (UI) of an app includes all the elements visible on the screen, such as text, images, buttons, and other interactive components. This session helped me understand the basics of designing and building user-friendly interfaces in Android apps using Jetpack Compose. |
| Day 57 | 08/12/2025 | I learned how to add images to an Android application. I understood the process of including image resources and displaying them within the app's user interface. Along with this, I completed an assessment quiz where the questions were based on the concepts and tasks I had learned. This helped me review my understanding and reinforce the practical knowledge gained during the session.                                                                                                                                                                     |
| Day 58 | 09/12/2025 | I worked on a Kotlin coding practice session. During this session, I followed the instructions provided as comments within the Kotlin code and implemented the logic accordingly. This activity helped me understand how to read and interpret code comments, apply concepts correctly, and improve my problem-solving and coding skills in Kotlin.                                                                                                                                                                                                                   |
| Day 59 | 10/12/2025 | I explored the Google Skills learning platform and reviewed the available courses and learning paths related to Generative AI. I started the course "Gemini for Data                                                                                                                                                                                                                                                                                                                                                                                                  |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | Scientists and Analysts,” where I learned about Gemini as a generative AI-powered collaborator on Google Cloud. I went through the introductory lessons and understood how Gemini supports data professionals in analyzing data and solving problems more efficiently. This session helped me become familiar with the platform layout, dashboard features, and progress tracking.                                                                                                                                                                                 |
| Day 60 | 11/12/2025 | I continued working on Google Skills by engaging in hands-on labs and enrolling in learning paths such as “Integrate Generative AI into Your Data.” I completed initial lab activities and tracked my progress through lessons and achievements like First Lab and Path Enroll. This session gave me practical exposure to using generative AI tools and helped me understand how these tools can be applied in real-world data and cloud-based workflows.                                                                                                         |
| Day 61 | 12/12/2025 | I attended a hands-on workshop on building a Geminipowered YouTube Summarizer using Google Code labs. I was introduced to the concept of summarizing long YouTube videos into concise summaries to save time and extract key information efficiently. The session explained how generative AI tools like Gemini can be used for content summarization and how such applications are useful for students and professionals. I also learned about the overall structure of the web application and the tools involved, such as the Gemini API and Google Gen AI SDK. |
| Day 62 | 13/12/2025 | I worked on creating my own YouTube Summarizer application by following the step-by-step codelab instructions. I learned how to build both the front-end and back-end of the application, integrate Gemini to generate summaries from YouTube video content, and deploy the web application. This hands-on experience helped me understand how generative AI can be practically applied to real-world problems and gave me confidence in building AI-powered web applications.                                                                                     |
| Day 63 | 15/12/2025 | Today, I worked on building an AI agent using Vertex AI Agent Builder. During this session, I designed my first AI agent and learned how to configure it by attaching relevant datastores so the agent could respond using grounded information. I also made the AI agent live to test its functionality and understand how it behaves in a                                                                                                                                                                                                                        |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | real-time environment. Finally, I performed the clean-up process after testing. This hands-on experience helped me understand the complete lifecycle of creating, deploying, and managing an AI agent using Vertex AI tools.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Day 64 | 16/12/2025 | A project was assigned to me on the topic Employee Performance Tracker, for which I worked on designing the user interface and preparing a flow chart for the Android application. I planned the screen layouts, defined the navigation flow between different screens, and focused on creating a smooth and userfriendly experience. Along with the design work, I also completed the tasks assigned as part of the project, which helped me improve my understanding of app planning, UI structuring, and project-based development.                                                                                                                                                                                                                                                        |
| Day 65 | 17/12/2025 | The topic assigned for developing the Android application was Employee Performance Tracker. Using guidance and references from online websites. The app includes a dashboard that displays important information such as total employees and departments, working hours, weekly working-hour trends, department-wise activity, and currently working employees. It also shows recent activities like closing deals with major clients, conducting employee onboarding sessions, launching new marketing campaigns, and completing code reviews for authentication. In addition to these features, the app includes several other components related to employee work tracking, which helped me understand practical aspects of designing and developing a performance management application. |
| Day 66 | 18/12/2025 | Today, I worked on the Employee Performance Tracker project, which is an Android-based application designed to monitor and analyze employee performance across different roles and departments. The objective of this app is to help organizations streamline performance reviews, maintain transparency, and identify top performers. The application is being developed using Kotlin, Jetpack Compose for the user interface, and Room Database for managing employee performance data efficiently.                                                                                                                                                                                                                                                                                         |
| Day 67 | 19/12/2025 | Today, I worked on developing the Employee Performance Tracker application, which acts as a digital performance log for managers and team leads to record tasks, assign goals, evaluate employee performance, and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | analyze outcomes. While working on this project, I focused on building a scalable and data-driven solution, helping me improve my skills in structured data handling, UI design, analytics, and implementing CRUD operations.                                                                                                                                                                                                                                                                                            |
| Day 68 | 20/12/2025 | Today, I learned how to design and develop a structured and intuitive Android application that enables teams to log and evaluate employee tasks and performance metrics. Through this work, I demonstrated proficiency in data collection, filtering, and analysis using the Room Database. This project also helped me create a real-world, portfolio-worthy application, strengthening my skills for future opportunities in HR technology, enterprise application development, and analytics-based app development.   |
| Day 69 | 22/12/2025 | Today, I worked on defining and implementing key goals for the Employee Performance Tracker project. These goals included enabling the tracking of employee KPIs and tasks, providing clear visual insights into individual and team performance, and supporting structured performance reviews using metrics such as punctuality, quality, and productivity. I also focused on building analytics dashboards and maintaining historical performance records to help analyze trends and support informed decisionmaking. |
| Day 70 | 23/12/2025 | Today, I worked on defining the out-of-scope features for the Employee Performance Tracker project. These included excluding multi-admin cloud synchronization, integration with biometric attendance systems or HRMS APIs, payroll or compensation management, and fully automated AI- based evaluation systems. Clearly identifying these out-of-scope areas helped me keep the project focused, manageable, and aligned with the defined objectives.                                                                  |
| Day 71 | 24/12/2025 | Today, I worked on identifying and defining the inscope functionalities for the Employee Performance Tracker project. These include adding, editing, and deleting employee profiles, assigning and monitoring tasks, and rating and reviewing employee performance. I also focused on tracking attendance and productivity trends, implementing local data storage using the Room Database, and generating analytical insights through charts, tables, and summaries. Additionally, I explored                           |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | the option of exporting basic reports as an advanced feature to enhance the usability of the application.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Day 72 | 26/12/2025 | Today, I worked on identifying the target users and defining personas for the Employee Performance Tracker application. The primary users include team leaders or HR representatives, who use the app to manage teams and evaluate employee performance efficiently, and employees, who use it to track their personal growth, achievements, and feedback history. This step helped ensure that the app's features and design are aligned with the needs of both management and employees.                                                    |
| Day 73 | 27/12/2025 | Today, I worked on implementing the Employee Management module for the Employee Performance Tracker application. I focused on adding core functionalities such as creating, editing, and deleting employee profiles. Each profile includes essential fields like Name, Employee ID, Department, Role, Joining Date, and Contact details, with an optional profile picture attached using a URI-based approach. This work helped me understand structured data handling and CRUD operations in an Android application.                         |
| Day 74 | 29/12/2025 | Today, I worked on the Task Assignment module of the Employee Performance Tracker application. I focused on creating and assigning tasks to employees by defining key fields such as Task ID, description, deadline, priority, assigned date, and status. I also implemented different task status options, including Pending, In Progress, Completed, and Reviewed. This work helped me understand task lifecycle management and improved my skills in structuring and tracking work assignments within an Android app.                      |
| Day 75 | 30/12/2025 | Today, I worked on the Performance Review feature of the Employee Performance Tracker application. I focused on rating employees across multiple performance metrics, including quality of work, timeliness, attendance, communication, and innovation or initiative. In addition to individual metric ratings, I added overall comments and a starbased rating system ranging from 1 to 5 stars. This work helped me understand how to design structured evaluation systems and capture qualitative and quantitative feedback within an app. |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Day 76 | 31/12/2025 | Today, I worked on designing and implementing the Analytics & Insights system for the Employee Performance Tracker application. I focused on creating a comprehensive section that provides a clear overview of both employee-level and department-level performance. The system includes an interactive dashboard that summarizes key metrics for individual employees as well as overall departmental data. The insights are presented using various charts, such as average performance ratings per employee to identify consistent performers, monthly improvement trends to track progress over time, and task completion rates to evaluate productivity and workload efficiency. This work helped me strengthen my understanding of data visualization and performance analytics within an Android application. |
| Day 77 | 02/01/2026 | Today, I worked on developing the Reporting feature for the Employee Performance Tracker application. I focused on generating concise text and CSV reports that clearly summarize employee performance data. I also implemented filtering options that allow users to sort and view information based on departments, selected time ranges, and performance categories. This work helped me understand report generation, data filtering, and presenting insights in a clear and structured format.                                                                                                                                                                                                                                                                                                                   |
| Day 78 | 03/01/2026 | Today, I worked on designing optional notification features for the Employee Performance Tracker application. I focused on creating UI-based indicators that notify users about upcoming deadlines and highlight tasks that are still pending or unreviewed. This feature improves usability by helping users stay informed and manage tasks on time, ensuring smoother workflow and better task tracking within the system.                                                                                                                                                                                                                                                                                                                                                                                          |
| Day 79 | 05/01/2026 | Today, I worked on designing the system architecture of the Employee Performance Tracker application using the MVVM (Model–View–ViewModel) pattern to ensure clean separation of code and efficient data handling. I developed the user interface using Jetpack Compose and implemented local data storage with the Room Database, with the entire application built using Kotlin. For data visualization, I integrated Compose Charts and MPAndroidChart to display analytical insights. The overall workflow followed a structured sequence—User → Compose UI → ViewModel → Repository → Room                                                                                                                                                                                                                       |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | Database—which enabled smooth communication between the UI and data layers and improved maintainability of the application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Day 80 | 06/01/2026 | <p>I worked on the database schema required for the employee performance tracking system. I created an employee table consisting of fields such as id, name, role, department, joining date, email, and contact to store complete employee profiles. I also developed a Task table with fields including id, employee id, description, status, and deadline to track all assigned tasks. For monitoring employee performance, I designed a Performance table that includes id, employee id, date, quality score, timeliness score, attendance score, communication score, innovation score, overall rating, and remarks, which collectively capture detailed performance evaluations.</p> <p>Additionally, I included an optional Attendance table with fields such as id, employee id, date, and status to maintain records of employees' daily attendance whenever required. This schema ensured structured data storage and efficient relationship management across the system.</p> |
| Day 81 | 07/01/2026 | <p>I worked on designing the user flow for the Employee Performance Tracker application. The flow begins with a Splash Screen, where the user can log in or continue as an Admin. Once the Admin logs in, they are directed to the Dashboard, which provides options to view all employees or add a new employee to the system. After selecting an employee, the application navigates to the Employee Profile page, where tasks can be assigned or the existing tasks can be viewed. I also worked on the Performance section, where the admin can add employee evaluations and view detailed performance reports. Additionally, I designed the Analytics section to display charts and a leaderboard to give a clear visual understanding of employee performance. The flow concludes with the option for the user to either log out or exit the application.</p>                                                                                                                     |
| Day 82 | 08/01/2026 | <p>Today, I focused on defining the design goals for the Employee Performance Tracker application. My aim was to create a professional, minimal, and clean interface that is easy to navigate. I prioritized readability, keeping in mind that the primary users are HR representatives who need to access information quickly and clearly. I also worked on visually highlighting ratings and analytics so that performance insights can be understood at a glance. This process helped me better understand user-centric design and the importance of clarity and visual hierarchy.</p>                                                                                                                                                                                                                                                                                                                                                                                               |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | in application interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Day 83 | 09/01/2026 | I worked on defining the color palette for the application, ensuring a clean and consistent visual design. The primary color I selected was Indigo (#3949AB), supported by a green accent shade (#43A047) for highlights and interactive elements. For warnings and critical notifications, I used Red (#F44336). The overall background was kept in a light gray tone (#FAFAFA) to maintain a simple and userfriendly interface.                                                                                                                                                                                                                                             |
| Day 84 | 10/01/2026 | Today, I worked on designing and organizing the key screens for the Employee Performance Tracker application. This included creating the Splash/Welcome screen, a Dashboard with quick statistics and top performers, a searchable and filterable Employee List, detailed Employee Profile pages showing tasks and ratings, the Performance Evaluation interface, an Analytics screen with charts and summaries, and a Settings/Reports section. This work helped me understand complete app flow design and screen-level organization for a functional Android application.                                                                                                  |
| Day 85 | 12/01/2026 | I worked on designing and implementing the Analytics and Insights section of the application. This included creating a bar chart to display the average performance rating of each employee, developing a pie chart to compare performance across different departments, and building a line graph to show the monthly improvement trends. I also implemented a dynamic feature that automatically identifies and highlights the top three performers based on realtime data.                                                                                                                                                                                                 |
| Day 86 | 13/01/2026 | Today, I focused on the initial planning and setup of the Employee Performance Tracker application. I worked on organizing the project structure and clearly defining the core data models needed to manage employee details, tasks, and performance records. I also created detailed Figma wireframes to design the layout of each screen and map the complete user flow of the app. This process helped me understand how different screens connect, how users will navigate through the app, and how data will flow across features. Overall, this work gave me a strong foundation for development and improved my understanding of planning and designing an application |

|        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        |            | before implementation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Day 87 | 15/01/2026 | Today, I worked on the UI development of the Employee Performance Tracker application. I implemented the main screens, including the Dashboard, Employee List, and the Add Employee interface. While working on these screens, I focused on creating a clean layout, smooth navigation, and a user-friendly design. This work helped me understand how to convert wireframes into actual UI components and improved my skills in building functional and interactive Android app screens.                                                                                                                                                                                               |
| Day 88 | 16/01/2026 | Today, I worked on developing the Task and Performance modules for the Employee Performance Tracker application. I implemented full CRUD (Create, Read, Update, Delete) functionality to manage employee tasks and record performance evaluations. This included creating tasks, updating task status, deleting tasks when required, and tracking employee performance across different metrics. This session helped me gain hands-on experience in handling dynamic data, implementing business logic, and strengthening my understanding of structured data management within an Android application.                                                                                 |
| Day 89 | 17/01/2026 | Today, I worked on integrating the Room Database into the Employee Performance Tracker application to enable reliable local data storage and retrieval. I focused on connecting the database with the app's data flow so that employee details, tasks, and performance records could be stored and accessed efficiently. Along with database integration, I worked on the analytics section by adding charts to visually represent performance insights. These charts helped display data such as performance trends and comparisons in an easy-to-understand format. This work improved my understanding of database integration and data visualization within an Android application. |
| Day 90 | 19/01/2026 | I worked on incorporating the final feedback provided during the project review. I refined the wireframes and ensured performance metric definitions were clear and well-structured. I updated the project documentation and weekly progress journal with final outcomes. I coordinated with team members to confirm task completion and readiness for future development. I also                                                                                                                                                                                                                                                                                                       |

|  |  |                                                                                                                           |
|--|--|---------------------------------------------------------------------------------------------------------------------------|
|  |  | ensured that the project setup and documentation were complete, marking the successful conclusion of the internship work. |
